

SaaS (Software As A Service)

**ONE VENDOR.
ONE SIMPLE SOLUTION.
ONE LOW MONTHLY PRICE.**

ProMan's 'Close Your Loop' Initiative

Manufacturers need more than software to compete in today's global marketplace. They need an effective management tool. To that end we are offering our 'close your loop' initiative to the small manufacturer.

ProManASP consists of SYSTEM, SERVICE & STRUCTURE – all optimized for small companies, allowing them to quickly develop a simple yet effective closed loop manufacturing system

All of this is hosted on servers at our state-of-the-art data center and connected to their company alone using secure communication methodologies.

Build your business - not your infrastructure

SYSTEM – ProManASP is a full-featured, flexible, enterprise-wide application covering all aspects of your manufacturing company with graphical and web-based application, analysis & communication tools to manage and enhance the productivity and profitability of your manufacturing operation.

SERVICE – All the aspects of managing and maintaining infrastructure to support your ProMan system are provided by our people who are experts in their field. Questions regarding system security, integrity, and responsiveness are removed from your list of responsibilities, freeing up more time for attention to your core business issues.

STRUCTURE – The ProManASP solution is designed to support growth and provide a flexible structure building on the experience of industry veterans. Our research has shown companies interested in our ASP product know their marketplace and their product, they just need an affordable solution that will spur their growth and grow with them.

10 Reasons when SaaS/Asp is right for you

10. You want to *budget for this application from your operating budget*, NOT your capital budget.
9. You *do not want to invest the financial resources* needed to develop and manage this application.
8. You *do not want to invest IT and physical infrastructure* to develop and manage this application.
7. You *do not want to invest your IT skills and resources* to develop and manage this application.
6. You know that the SaaS / ASP application has the *appropriate levels of security and availability*.
5. You know that *the SaaS / ASP application* can be integrated with other Windows applications if needed.
4. *Supply chain partners outside of your organization* will be accessing the application.
3. You have *low tolerance for implementation delays* and hidden costs.
2. You have an *urgent need* for this application.
1. The needed *functionality is available* via SaaS / ASP – **ProMan ASP of course.**
